

Do you have a **process** to manage your fleet?

Are you able to **accurately take account** of your fleet at any given point in time, including tires and fuel?

Do you know your **vehicle history**?

**Who** is operating your fleet?

Are you sure your fleet is being used in the **most efficient** manner?

Are you **overpaying for maintenance**?

Do you know the **performance** of your fleet and its drivers?

Do you know when to **dispose** the vehicle?

**Do you have a "Fleet Management System"?**

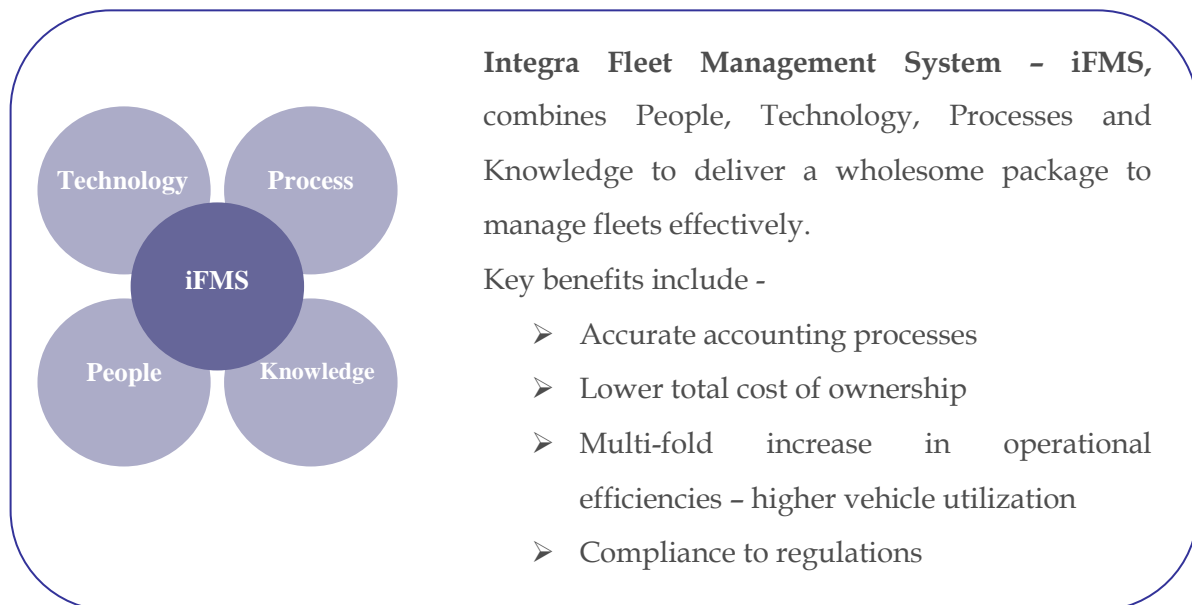

iFMS

## Why Fleet Management Systems?

Organizations, big or small, and in any industry sector, run a fleet of vehicles that are critical to their daily operations.

Fleet management is a task in itself, which is generally neglected from a strategic view point. Often, this task is done manually which is highly person dependent, time consuming and very clerical. The complexity of this task grows multi-fold in large conglomerates that generally have insular business units managing their own fleet of vehicles, again, with poor efficiency, compounding the overall complexity of this task.

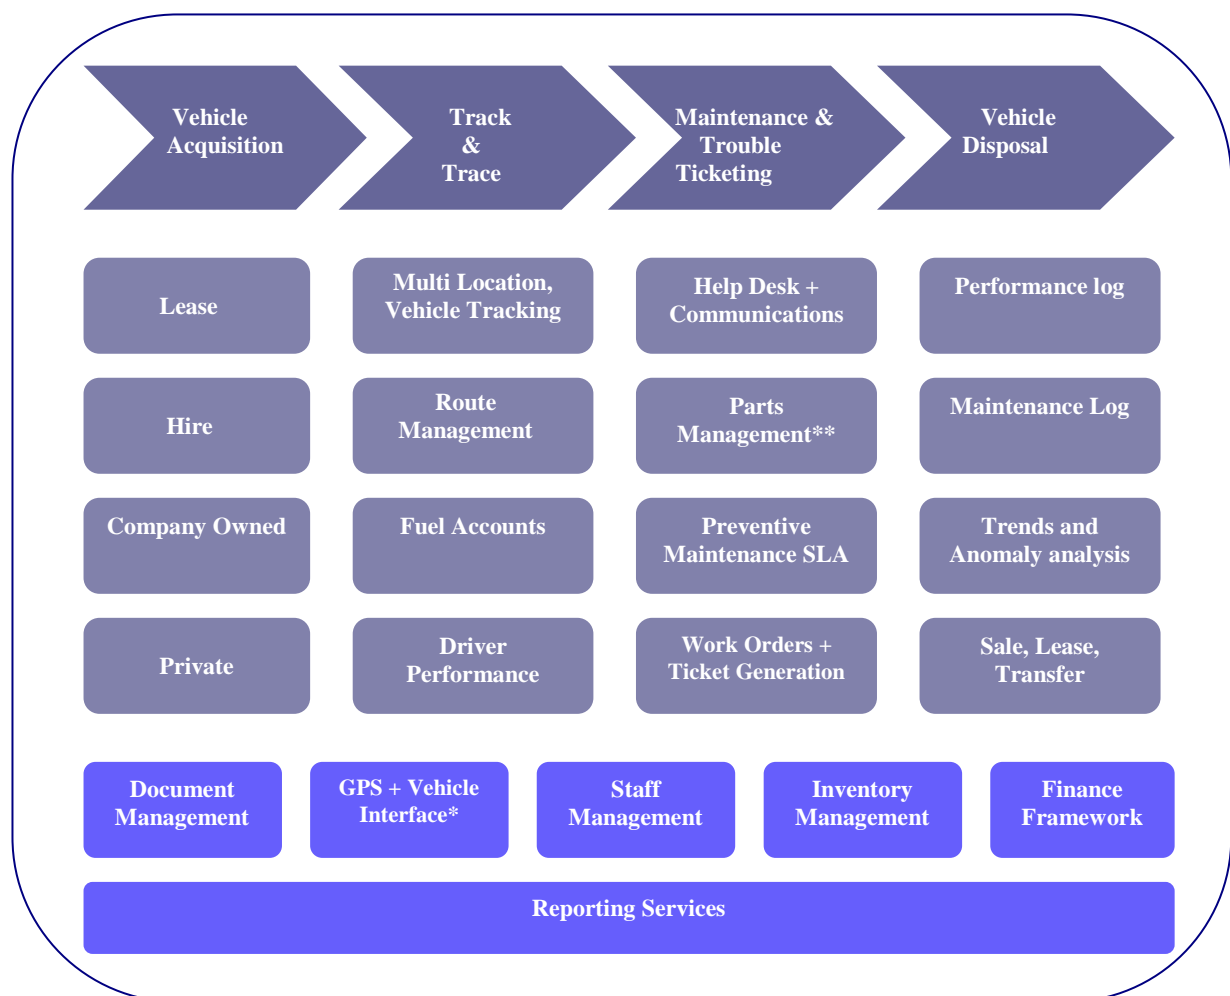

Costs associated with such obscure maintenance are high and lack transparency. Accounting of every transaction, drive, maintenance, consumption of perishable and non perishable items, to project overall performance of both vehicle and its driver, needs complex reporting, information analysis, efficient inventory management and integration with the finance framework of an organization, in a fair and transparent manner. If done manually, it only adds up to loss in investments, inaccurate accounting and loss of vital data.

## iFMS Components

iFMS combines superior technology with features designed specifically for the transportation industry.

From managing vehicle acquisition to developing comprehensive management software, iFMS brings in total control, insight and accountability to organizations with an unparalleled efficiency; saving your time and operational cost. Its helps streamline processes to track each vehicle's total life cycle costs from the date of its acquisition to its disposal.

### iFMS - End to End vehicle life cycle management

\* Optional add on

\*\* Optional Barcode/ RFID

## Key Features

- Web based solution to share information across multiple locations
- Report generation on people, assets and performance
- Customizable reports for trend analysis, anomalies and exception data
- Integrate with existing accounting systems
- Ready to integrate with Barcode/ RFID based inventory and maps based GPS + Engine interface

## Location

- Locate multiple vehicles
- Display route history for any vehicle
- Define and monitor geographies
- Schedule routes

## Preventive Maintenance

- Track Warranties
- Parts replacement
- Track Maintenance SLAs

## Document Management

- Paper less instant access
- Easy archival and retrieval
- Work flow ready
- Track Insurance policies

## Inventory Management

- Track Fuel consumption and costs
- Monitor Tire usage
- Track spare parts across multiple locations
- Direct and refer spare parts
- Barcode/ RFID ready

## Staff Management

- Maintain personnel master
- Monitor daily activities
- Manage Performance

## Reporting Services

- Consumption statistics
- Vehicle performance
- Staff performance
- Exception based reports
- Tour charts
- Trend analysis

## Trouble Ticketing

- On demand work orders
- Track work completion
- Manage staff SLAs
- Cost control
- Inventory control
- Vendor Management

## Open Source Technologies

- MySQL Server
- Linux (Windows version available)
- JBoss AS, Apache

## About Integra

Integra is an ISO 9001:2008 certified, twenty seven year old software products and services company, headquartered in Bangalore, India.

Its main stream activities are creation of IP, technology consulting, quality process consulting, open source training, banking and financial inclusion systems, system integration, and value added products distribution.
